Aluminum Shell

Corrosion resistant. Optional stainless steel or powder-coated steel available.

Available in two models:

LC-1 Includes basic heater with eye-level control only

LC-110 Includes above plus 110V converter

PORTABLE PROPANE CARGO HEATERS

The **ELSTON** line of cargo space heaters has remained the standard of the trucking industry for decades. An 18,000 btu* system designed to heat the over-the-road trailers or cargo vans. The series 700 and 900 heaters are easily moved from trailer to trailer. These compact, portable units provide dependable, economical cargo protection.

Our Catalytic Cargo Heaters (available in all three styles) are fool-proof and flameless, designed to deliver clean even heat throughout the cargo space. Each model features U.S. made and approved components including safety shut off, thermostat controls and manual pilot light spark ignition. Available in three models, the long-range over-the-road double bottle CAT-900, the single bottle CAT-700 for city pick-up and delivery, and the CAT-118 for trailer or van bodies where externally mounted bottles are desired.

CATALYTIC CAT-118
PORT BURNER X-118
DESCRIPTION: Wall Mount

CAT-700
X-700
Single Bottle

CAT-900
X-900
Dual Bottle

Wheels make it easy to move heaters from trailer to trailer.

Our original Port Burner (Open Flame) Series (available in all three styles), are portable, rugged, and dependable and used in many industries including horticulture. The ultra- clean propane burner system expels none of the damaging gases that harm this delicate cargo. Designed with the same safe, low-maintenance features as the Catalytic Series.
